

I would like to make a few comments on XM Sattelite Radio. I am an over the road truck driver and XM is the greatest thing that could of happened for my profession. I can now listen to any station I want for as long as I want. When XM came out with the traffic and weather channels it made my job a lot easier. I can now tune in and listen to the traffic before I get to the city to see if there are any problems I need to avoid. If I have to listen to a local channel I have to wait until I get within range of the channel and then put up with all the nonsense that is on why they are trying to "entertain" people. Most of the times the traffic reports don't even tell you what you want to know. Please don't give in to the NAB'S petition to stop XM from providing a much needed service to those of us that need it.
